How the best perform

Hu-Friedy

THE INSTRUMENT MANAGEMENT SYSTEM CYCLE

Optimal infection control and prevention are facilitated by the use of tools that allow for improved efficiency and safety. Instrument integrity is further enhanced by the use of Hu-Friedy's Instrument Management System (IMS). IMS allows clinicians to move instruments from cleaning through chairside without touching or damaging the instruments.

INSTRUMENT MANAGEMENT SYSTEM (IMS) CYCLE

- CHAIRSIDE
- PRECLEANING
- RECEIVING AND CLEANING
- LUBRICATION
- STERILISATION AND MONITORING
- ORGANISATION AND STORAGE

Chairside: Patient Preview & Presentation
- Systematically organises instruments according to procedure type, allowing for more focus on patients and less time spent looking for missing instruments
- Neatly organised instruments offer more professional appearance and can help enhance referrals

Sterilisation: Wrapped & Ready
- Cassettes with instruments are packaged and placed in autoclave together to help reduce consumable usage
- Reduced handling of instruments provides safer protocol and minimises liability

Cleaning: Processed & Prepped
- Instruments are kept together throughout cleaning, rinsing and drying, reducing the potential for breakage or loss
- Allows for less handling of instruments, reducing the chance for sharps injuries

Storage: Neat & Complete
- Ready for use or storage until needed for increased time savings
- Complete procedural set-ups for easy set-up and teardown
Revolutionary new hole pattern design: with 1/3 more open area allows for improved cleaning and sterilisation. Designed for optimal use in thermodisinfector.

Ergonomic latch with positive locking mechanism: safe and easy-to-use; allows for one-handed opening and visual indication if cassette is locked/unlocked.

Innovative silicone rail system features: less instrument contact for more flow through while protecting the instruments through reprocessing.

High quality, electropolished stainless steel provides a protective sheet against corrosion and a professional appearance.

3 new colors added for the silicone rail color-coding system.

New beveled edge allows for easier pick up of cassette.

Smooth Round Corners and Slotted Edges: increase drainage and reduce drying time.

Use the formula below to calculate how much time and money your office could save with IMS

CALCULATE YOUR TIME SAVED
(based on a conservative estimate of 5 minutes saved per procedure)

1. Number of Procedures Per Day _____
2. Multiply by Time Saved (5 minutes) X 5
3. Total Time (minutes) Saved Per Day = _____

CALCULATE YOUR POTENTIAL REVENUE PER DAY

4. Your Average Billing Hour € _____
5. Divide #4 by 60 Minutes ÷ 60
6. Revenue Per Minute = € _____

7. New Revenue Per Day (#6 x #3) € _____
8. New Revenue Per Year (#7 x Days Worked) € _____

POTENTIAL ADDED REVENUE PER DAY

Revenue Per Day	€1,000	€2,000	€3,000	€4,000	€5,000
10	€104	€208	€313	€417	€521
20	€208	€417	€625	€833	€1,042
30	€313	€625	€938	€1,250	€1,563
40	€417	€833	€1,250	€1,667	€2,083
50	€521	€1,042	€1,563	€2,083	€2,604

Example: A practice billing €2,000 of revenue a day doing 20 procedures would be able to generate an additional €417.00 per day with the time saved using IMS.
€2,000 ÷ 480 minutes (8 hours) = €4.17 revenue/minute.
20 procedures x 5 minutes saved/procedure x €4.17/minute = €417.00.
Based on an average; it can be different in different countries.

- Time saved does not include improved chairside efficiency.

- Time saved can be used to improve office workflow and patient care, including time to assist, appointment callbacks, four-handed hygiene, etc.

DID YOU KNOW?

Using IMS cassettes for instrument processing can save your office staff up to 10 minutes per procedure.

SIGNATURE SERIES TUBS

Together, procedure tubs and cassettes create the most efficient and organised system for managing instruments and consumable products. The time savings achieved by using IMS (Instrument Management System) cassettes and procedure tubs will allow the staff to spend time on more value added activities in the dental office.

Signature Series tubs are designed to match IMS cassette rail colors. Antimicrobial protection is integrated into the tub and tub components during the manufacturing process. This technology works by interrupting key cell functions that allow the microorganisms to function, grow and reproduce. Antimicrobial protection begins to work as soon as the microorganism comes into contact with the product surface and works continuously to inhibit the growth of microbes that can cause stain, odors and product degradation – for the lifetime of the product.
