INNOVATION HAS A NAME

FAST AND SURPRISING RESULTS

The laser is the fastest and most effective way of achieving naturally white teeth, without causing any damage. The whitening process is set off by the photo-activation of the hydrogen peroxide contained in the **LWS Laser Whitening System**. Laser light activates the product applied to the surface of each tooth, and starts the release of free radicals. Their reaction with molecular pigments creates a surprising whitening effect.

LWS Laser Whitening System combines the bleaching gel and activator in a double auto-mixing syringe which contains 5g of product with 35% of hydrogen peroxide. The special photocatalyst in the mixture offers naturally white teeth and avoids possible overheating to the dentinal pulp. Excellent results, without side effects!

before

after

The **LWS Laser Whitening System** is a professional product for dental bleaching, for use with Doctor Smile 980nm lasers.

Each package contains:

- | | |
